

PROBLEM SOLVER

PROBLEM:

Some lubricants cannot withstand extremes for reliable coverage or protection.

- Difficulty applying lubricants in tight gaps, cracks, openings, and crevices.
- Thin lubricants sling off and won't adhere to metal.
- Lubricants are often visible on exposed hinges.

SOLUTION:

Kent Automotive® Pene-Grease SL Lubricant

- Sprays on thin, then thickens and cures into a clear, grease-like gel, providing long-lasting protection under harsh conditions.
- Highly adhesive formula resists sling-off and leaves protective coating to prevent corrosion.
- Virtually invisible when cured and won't show in exposed areas.
- Water resistant and safe at extreme temperature.
- Silicone-free and rubber-safe.

APPLICATIONS:

- Hood, hatch, and door hinges
- Engine controls and linkages
- Seat tracks
- Lock mechanisms

INDUSTRIES:

- Agriculture
- Automotive
- Construction — heavy equipment
- Equipment Rental
- Government
- Oil & Gas
- Transportation
