

PROBLEM SOLVER

PROBLEM:

Sealing threaded joints can lead to the following problems:

- Fittings can leak due to vibration, corrosion, and pressure.
- Hydraulic pumps and valves can clog if tape is used for sealant.
- Sealant on high-temperature and high-pressure fittings can fail.

SOLUTION:

Lawson Tefseal Pipe Sealant with PTFE

- Cream form prevents leakage and clogs from vibration, corrosion, and pressure.
- Temperature range: -65°F to 500°F (-54°C to 260°C).
- Seals carbon steel, aluminum materials, Monel[®], and stainless steel.
- Seals connections carrying most industrial acids, solvents, chemicals, gases, and steam.

Available in 35ml and 250ml tubes

APPLICATIONS:

- Air pipes and hoses
- Water pipes
- Gas pipes
- Steam pipes
- Hydraulic pipes and fittings
- Fuel oil lines

INDUSTRIES:

- Agriculture
- Construction
- Education
- Equipment rental
- Facility maintenance
- Government
- Manufacturing
- Mining
- Transportation
- Utilities
- Warehousing
