

### Overview

#### Penetrating chain and cable lubricant with moly

Penetrating action goes to the core of steel cables, displaces water and leaves a lubricating film, which prevents rust and corrosion. Special moly additive reduces friction and resists high-temperature breakdown.

### Features/Benefits

- Sprays on as a penetrating foam, then dries to a semi-grease
- Non-sling formulation
- Contains molybdenum
- Blend of lubricating and mineral oils
- Penetrates into cables and chains
- Protects against friction and wear
- Keeps cables flexible, reducing wear
- Protects against rust and corrosion
- Aerosol spray designed to lubricate hard-to-reach areas
- Contains surfactants to improve metal-surface wetting
- CFIA authorized

### Applications

- Penetrates and restores movement of cables, chains and wire ropes
- Lubricates and protects cables, chains and wire ropes
- Lubricates and protects chains and chain drives
- Marine and boat
- Farm implements
- Outdoor service
- Mining applications and equipment
- Construction equipment

### Method of Application

- Aerosol

### Identification

- Aerosol, black spray-out

### Size

- 20 Fl. Oz. Can Size: 16 Oz. (454g) Net Wt.

## Directions for Use

1. Shake aerosol can well.
2. Core works best when surfaces to be sprayed are free of debris, dirt and moisture.
3. Spray surfaces generously.
4. Wait a few moments for lubricant to penetrate into surface cavities.

## Technical Specifications

- Form: Aerosol
- Color: Black
- Odor: Petroleum/solvent
- Specific Gravity (Concentrate):  
0.864 at 70°F (21°C)
- Reportable VOC Content: 16.75% by weight
- Shelf Life: Minimum one year
- HMIS: H:1 F:4 pH:0
