

Overview

- Specializes in multi-material applications, but can be used in a wide range of materials including masonry, steel, aluminum, ceramics and roofing material
- Self-starting tip eliminates walking and reduces vibration
- Designed to drill through layers of different materials in rotary mode (for metal) or impact drilling
- Drills any material up to Rc 65 hardness in a drill press application

Example of stacked layers of different materials (from top to bottom: porcelain or ceramic tile, thinset, sheet metal, particle board, cinder block)

Hollow metal door frame into concrete

Drill through metal stud into concrete
